

**Serials Cooperative Cataloging Training Program
(SCCTP)**

**Basic Serials Cataloging
Workshop**

© 2008 The Library of Congress

Workshop goals

- Identify serials and distinguish them from monographs and integrating resources
- Become familiar with MARC 21 tags used for serials
- Create original serials cataloging records
- Identify “appropriate” serial copy and needed edits

Session 1: Introduction

- Where do serials fit in the world of continuing resources?
- How does serials cataloging differ from the cataloging of monographs and integrating resources?
- What are the current conventions and practices?
- What tools are available?

3

Serials, Seriality, and Continuing Resources

- Serials are one category of “continuing resource”
- Integrating resources are the other category
- Both exhibit *seriality* because they are issued or updated over time and can change
- Because they are issued in a different manner, the cataloging rules for them differ

4

Representation of Bibliographic Resources

Finite resources

Monographs

Updates remain discrete

Continuing resources

Serials

Integrating resources

Updates do not remain discrete

5

Serial Cataloging Records

- Reflect the whole publication
- Are dynamic because they incorporate changes over time
- Are cooperative creations (e.g., one library may create the record, another may update it)
- Are important to the overall control of the serial and often are essential to other records (holdings, check-in)

6

Successive Entry Cataloging

- Convention applied to all serials cataloged according to AACR2
- Any major change results in the creation of a new (successive) record
- Records are linked using 780/785 fields
