Appendix A: MARC Tagging for Integrating Resources

Contents

For General Reference and Use with Workshop Exercises

1. Fixed field combinations
2. Commonly-used tags
3. Type of record
 - Examples of "Type"
4. Fixed Field elements
 - 006 Fixed length data elements
5. 007 field
6. Variant titles (246 field)
7. Order of notes (5XX field)
8. Linking Fields (7XX field)
9. Online access (856 field)

1. Fixed Field Combinations in Integrating Resources

Electronic Integrating Resource (Textual)	Leader	→	Type = a BLvl = i
	008	→	Continuing Resource
	006	→	Electronic resource
	007	→	Electronic resource
Computer File Integrating Res. (non-language based)	Leader	→	Type = m BLvl = i
	008	→	Computer file
	006	→	Continuing Resource
	007	→	Computer file
Updating Cartographic Web Site	Leader	→	Type = e BLvl = i
	008	→	Map
	006	→	Continuing Resource
	006	→	Computer file
	007	→	Map or atlas (optional)
	007	→	Electronic resource

2. Commonly-Used Tags in Integrating Resource Records

Leader/008	Fixed field display found in OCLC or local system
006	Fixed-length data elements—additional material characteristics
007	Physical description fixed field
010	LCCN
020/022	ISBN/ISSN
090/050	Call number
100/110/111/130	Main entry (personal, corporate, conference, uniform title)
222	Key title (ISSN)
245	Title statement
246	Varying form of title
247	Former title
250	Edition statement
260	Publication, distribution, etc. (Imprint)
310/321	Current publication frequency / Former publication frequency
362 1_	Dates of publication and/or sequential designation
490	Series statement
(538)	System requirements:
(538)	Mode of access:
500	General notes
(516)	Type of computer file or data note
530	Added physical form available note
546	Language note
550	Issuing body note
580	Linking entry complexity note
600/650/655	Subject added entry
700/710/711/730	Added entry (personal, corporate, conference, title)
76X-78X	Linking entries
8XX	Series added entry
856	Electronic location and access

3. **Type of Record (see MARC21 Codes: <http://www.loc.gov/marc/bibliographic/>)**

1. *Type of Record (LDR/06)*

Indicates the characteristics of (and defines the components of) the record

a – language material	g – projected medium	o – kit
c – notated music	i – non-musical	p – mixed material
d – manuscript notated music	j – musical sound recording	r – three-dimensional artifact
e – cartographic material	k – 2-dimensional non-projectable graphic	t – manuscript language material
f – manuscript cartographic mat	m – computer file	

2. *Additional tips for coding type of record*

Use "a" (language material) for:

- World Wide Web sites, when the content consists of primarily textual Web pages with incidental images, hypertext links, or search software, e.g.: ACLU Web site
- Collections or databases of textual links to other resources
- Web portal pages consisting of textual links to other resources
- Online bibliographic databases such as library online catalogs
- Numeric data presented in tabular form not manipulable by computer

Use "m" (computer file) for:

- Computer Software, when the resource consists of computer software, including programs, games, fonts
- Numeric Data, when the resource consists of numeric data such as census or survey data that resides in a database and that is manipulable by computer
- Computer-oriented Multimedia, when the resource consists of (1) the combination of two or more media such as audio, video, images, animation, etc. and (2) no single aspect comprises the significant content
- Online Systems or Services, when the resource consists of an online system or service supporting system-based user interaction. The presence of search software or of active hyperlinks does not constitute a computer program and does not make a resource an online system or service for cataloging purposes. In the area of online systems or services, consider whether the system itself (for example, a library system providing access to several databases), or the content of several constituent databases, is being cataloged. When cataloging the system itself use "Type" code "m" and "File" code "j".

Examples of online systems or services include: Online library systems (consisting of a variety of databases), ftp sites, electronic bulletin boards, network information centers, campus-wide information systems, discussion groups or lists (via "listserv" or newsgroup), news and weather reports with system-based user interaction, airline reservation systems, online stock investment sites.

Guidelines for Coding Electronic Resources in Leader/06. Rev. 2007. Network Development and MARC Standards Office, Library of Congress. <http://www.loc.gov/marc/ldr06guide.html>

Weitz, Jay. *Cataloging Electronic Resources: OCLC MARC Coding Guidelines.* Rev. 2006

Examples of *Type*

Example	FF Type	FF Nature of contents	006 Type of computer file
Online bibliographic database Medline LC Voyager	a		e
Collection of online databases NLM IndexCat (Locator Plus & Index-catalog of the library of the surgeon general's office)	m	j	
Web-based computer software Currency converter software	m	b	
CD-ROM of a census with manipulable data	m	a	
Electronic serial with search software	a		e
Collection of electronic serials with search interface JSTOR Project Muse	a		d
Electronic journal American imago	a		d
Online system or service Airline reservation service Online stock investment site	m	j	
Web site with significant audio & video CNN Web site	m	m	
Web portal page (Web page with collection of links) <i>Tools for Serials Catalogers</i>	m		d

4. ***Fixed Field (LDR + 008)***

Continuing Resources		Rec stat	c	Entered	20040811	Replaced	20081001091644.4
Type	a	ELvl		Src	c	GPub	
BLvl	i	Form	s	Conf	0	Freg	d
S/L	2	Orig	s	EntW		Repl	r
Desc	a	SrTp	w	Cont	b	DtSt	c
						Dates	19uu , 9999

S/L: Entry Convention: Specifies whether the continuing resource is cataloged according to successive entry, latest entry, or integrating entry cataloging conventions

- 2 Integrating entry: Code "2" indicates that a resource is cataloged under its latest (most recent) title, issuing body, or personal name heading. A new record is made only when there is a major change in edition or it is determined that there is a new work, and for title mergers and splits. It is used for integrating resources and electronic serials that do not retain their earlier titles.

Form: Form of item: The form of item code specifies the physical form of the item being cataloged: **s** electronic

Orig: Form of original item: Physical form of material in which the item was originally published: **s** electronic

SrTp: Type of continuing resource: Codes indicate whether an integrating resource is an updating database, loose-leaf, a Web site, or none of these.

d Updating database

w Updating Web site

S/L	2	Orig	s	EntWk		Regl	r
Desc	a	SrTp	w	Cont	b	DtSt	c
						Dates	19uu , 9999

Freq: Frequency

A one-character code that indicates the frequency of an item; used in conjunction with Regularity.

# No determinable frequency (irregular)	i Three times a week
No attempt to code	j Three times a month
a Annual	k Continuously updated
b Bimonthly (every two months)	m Monthly
c Semiweekly (twice a week)	q Quarterly
d Daily	s Semimonthly (twice a month)
e Biweekly (every two weeks)	t Three times a year
f Semiannual (twice a year)	u Unknown
g Biennial (every two years)	w Weekly
h Triennial (every three years)	z Other frequencies

Regl: Regularity

A one-character code that indicates the regularity of an item; used in conjunction with Frequency

u Unknown
 | No attempt to code
 r Regular
 n Normalized irregular
 x Completely irregular

EntWk: Nature of entire work

Up to three one-character alphabetic codes (recorded in alphabetical order) that indicate that a work *contains* certain types of materials.

# - Not specified	k - Discographies	u - Standards/specifications
a - Abstracts/summaries	l - Legislation	v - Legal cases and case notes
b - Bibliographies	m - Theses	w - Law reports and digests
c - Catalogs	n - Surveys of literature in a subject area	y - Yearbooks
d - Dictionaries	o - Reviews	z - Treaties
e - Encyclopedias	p - Programmed texts	5 - Calendars
f - Handbooks	q - Filmographies	6 - Comics/graphic novels
g - Legal articles	r - Directories	- No attempt to code
h - Biography	s - Statistics	
i - Indexes	t - Technical reports	

GPub: Government Publication

One-character alphabetic code that indicates whether an item is published or produced by or for an international, national, provincial, state, or local government agency, or by any subdivision of such a body, and, if so, the jurisdictional level of the agency.

# - Not a government publication	m - Multistate
a - Autonomous or semi-autonomous component	o - Government publication-level undetermined
c - Multilocal	s - State, provincial, territorial, dependent, etc.
f - Federal/national	u - Unknown if item is government publication
i - International intergovernmental	z - Other
l - Local	- No attempt to code

Audience

Unknown or unspecified. The target audience for the item not known or not specified.

- a Preschool. The item is intended for children, approximate ages 0–5 years.
- b Primary. The item is intended for children, approximate ages 6–8 years.
- c Pre-adolescent. The item is intended for young people, approximate ages 9–13 year.
- d Adolescent. The item is intended for young people, approximate ages 14–17 years.
- e Adult. The item is intended for adults.
- f Specialized. The item is aimed at a particular audience and the nature of the presentation make the item of little interest to another audience. Examples include: Items which address a limited audience, e.g., the employees of a single organization. Technical software or sound recordings geared to a specialized audience. Training films intended for the special education of the physically or mentally handicapped.
- g General. The item is of general interest and not aimed at an audience of a particular intellectual level. Use for items that are not covered more appropriately by the other codes.
- j Juvenile. The item is intended for children and young people, approximate ages 0–15 years. Use when a more specific code for the juvenile target audience is not desired.

File

- a** Numeric data. Files that are mostly numbers or representation by numbers (e.g., student test scores, football team statistics, etc.).
The information may be original surveys or information that has been summarized or statistically manipulated.
- b** Computer program. Ordered sets of instructions directing the computer to perform operations and identifying the information and mechanisms required. A program is a series of instructions given to complete a task.
Use for micro-computer software.
Use also for computer models, which are a characterization in mathematical terms of a process, object or concept, that enables the manipulation of variables to determine how the process, object or concept would behave in different situations.
- c** Representational. Files that have pictorial or graphic data. The pictorial and graphic data can be manipulated in conjunction with other types of files to produce graphic patterns, which can be used to interpret and give meaning to the information.
Use for both still and moving images.
- d** Document. Files that are mostly alphabetic information (words or sentences) converted into a code that can be processed, sorted and manipulated by machine and then retrieved in many optional formats.
Use for records containing full text of documents and material intended to constitute a textual document, whether represented as ASCII or image data.
Use for both single bibliographic entities or a collection of bibliographic entities. Documents whose primary purpose is textual, even if search software is present, are coded d.
- e** Bibliographic data. Data that are bibliographic citations, including library catalogs or citation databases. May be structured or unstructured.
- f** Font. File contains information for a computer to produce fonts.
- g** Game. File is for recreational or educational use. Usually text and software, including videogames.
- h** Sounds. File has data encoding computer producible sounds.
- i** Interactive multimedia. Item supports navigation through and manipulation of many kinds of media (audio, video, etc.) in which the user has an almost conversational interaction with the computer.
- j** Online system or service. Record is for an online system or service that may contain nonbibliographic information. An online system or service supports system based user interaction. For example, online library systems, FTP sites, electronic bulletin boards or network information centers.
- m** Combination. Computer models and numeric data files or computer programs and text files.
- u** Unknown
- z** Other

[Change in Type of Issuance](#)

[Initial Articles](#)

What Is Being Cataloged?

This section represents LC/PCC *practice*.

Before creating a bibliographic record, determine what is being cataloged. Answer these two questions:

- 1) What aspect of the bibliographic resource will the bibliographic record represent?
 - a) A resource may not be part of a larger resource and so the bibliographic record can represent only that resource.
 - b) A resource may be part of a larger resource (one part of a multipart item, one analytic of a monographic series, one of several separate resources on a Web site, etc.). The bibliographic record could represent the "smaller" or the "larger" resource.

c) A resource may not be part of a larger resource but local cataloging policies may specify creating a bibliographic record for a made-up larger resource of materials that are not published, distributed, or [produced together](#).

2) What is the type of issuance of that aspect?

a) See both the definitions from [AACR2 appendix D](#) and the diagram in "[Type of Issuance](#)" below.

b) If the situation is still not clear, then consider the guidelines given in two other sections of this LCRI: "[Monograph vs. Serial](#)" and "[Situations Requiring Further Consideration](#)."

c) See the section "[Edition or Copy of Monograph](#)" for guidelines about creating separate records for monographs.

It may be appropriate, after one or more bibliographic records have been cataloged, to change the cataloging decision (e.g., recatalog a monograph as a serial). See the section "Change in Cataloging Decision" for guidelines.

Also, a publisher may change the type of issuance of a bibliographic resource. See the last section, "[Change in Type of Issuance](#)," for guidelines.

Type of Issuance

This section represents LC/PCC *practice*.

"Type of issuance" refers to how the bibliographic resource is published, distributed, or produced and, if it is updated, how it is updated. There are three types of issuance: monograph, serial, and integrating resource. (See the definitions from [AACR2 appendix D](#) and [diagram](#) below.)

Monograph: A bibliographic resource that is complete in one part or intended to be completed in a finite number of parts. The separate parts may or may not be numbered.

Use rules in [chapter 1](#) and the chapter(s) representing the carrier.

Serial: A continuing resource issued in a succession of discrete parts, usually bearing numbering, that has no predetermined conclusion.

Use rules in [chapter 1](#), [chapter 12](#), and the chapter(s) representing the carrier.

Integrating resource: A bibliographic resource that is added to or changed by means of updates that do not remain discrete and are integrated into the whole. Integrating resources can be finite or continuing.

Use rules in [chapter 1](#), [chapter 12](#), and the chapter(s) representing the carrier.

In case of doubt about type of issuance, apply the following guidelines:

If the decision has been narrowed down to "serial vs. integrating resource" and there is no information about the type of issuance but the resource has wording that refers to "edition," determine if that wording represents a numeric designation or an edition statement. If it is a numeric designation, catalog the resource as a serial; if it is an edition statement, catalog it as an integrating resource.

If the decision has been narrowed down to "monograph vs. integrating resource" and there is no information about the type of issuance, catalog the resource as an integrating resource if there is a likelihood the resource will be updated (i.e., assume the updates will not be discrete); catalog as a monograph if there is no indication that the resource will ever be updated.

Monograph vs. Serial

This section represents LC/PCC *practice*.

If the bibliographic resource to be cataloged and/or other bibliographic records in the database indicate that the resource has been or will be published in more than one part that will remain discrete or be published more than once, *consider the combination of characteristics below* in deciding whether to catalog the resource as a single-part/multipart monograph or as a serial. Note the exception for publications of limited-duration activities at the end of this section.

1) *Frequency of publication*

a) If the resource has a stated frequency of publication (in the title proper, in the preface, etc.), catalog as a serial.

b) If the resource is published in new editions, catalog as a serial if the frequency of the editions is one to two years; give greater consideration to continuing to catalog as monographs if the editions are published three or more years apart.

2) *Presence and type of numbering.* Although the presence of numbering is no longer part of the definition of a serial, most serials except for unnumbered monographic series will have numeric, alphabetic, and/or chronological designations.

a) If the resource has a numeric/alphabetic (e.g., volume 1; tome 3; Heft A) or chronological designation (e.g., 2001; June 2002; 2002-1) in the title proper or elsewhere in the resource and it is likely that the resource doesn't have a predetermined conclusion, catalog as a serial.

b) If the resource has acquired a numeric, alphabetic, or chronological designation after the first issue, recatalog as a serial.

c) If the resource is published in frequent editions (see [1\)b](#) above), it must have a designation (e.g., date, numeric edition statement) that could be used as numbering in order to be cataloged as a serial.

3) *Likelihood of no predetermined conclusion.* If the resource indicates that there is no predetermined conclusion, catalog as a serial. If the resource doesn't have such information, assume that a resource that has either of the following characteristics is a serial if it also meets the criteria given above for frequency and numbering.

a) Title proper implies continuing publication. If the title proper includes words that imply continuing publication (e.g., "Advances in ...;" "Developments in ...;" "Progress in ..."), catalog as a serial. If the issues also have analyzable titles, analyze the issues.

b) A subscription can be placed for the resource.

Publications of limited-duration activities: Also use the serial rules in [chapter 12](#) for the cataloging of certain resources related to limited-duration activities *provided* that these resources have some characteristics of serials: successive issues, numbering, and perhaps frequency. Examples include a daily bulletin issued during a non-recurring meeting, a quarterly activities report of a project, and an annual report of an expedition. Do not recatalog records for such resources created before Dec. 1, 2002.

Situations Requiring Further Consideration

This section represents LC/PCC *practice*.

1) *Electronic resources.* If the resource was/is published in print, make the decision to catalog the electronic resource as a serial, integrating resource, or monograph based on the electronic resource itself, not on how it was issued in print. Information about the planned type of issuance may be given in the resource's "read me" files, etc.

a) Catalog as serial:

i) Remote access resource: a resource having material added as discrete, usually numbered issues (an "issue" can consist of a single article). The resource might contain a listing of back volumes, back issues, images of journal covers for sequential issues; only current issue may be available as a separate issue

ii) Direct access resource: a resource whose carrier is issued successively (this situation is analogous to a print serial whose latest volume supersedes any earlier volumes).

Note that such resources can be mounted on networks such that the successive issuance of the carrier is not observable to the cataloger or end user; when contributing cataloging in a shared environment (e.g., bibliographic utility), the record should reflect the carrier and type of issuance as published.

b) Catalog as an integrating resource:

i) Remote access resource: a resource having material added, changed, or deleted via updates that do not remain discrete (e.g., might contain articles from more than one journal).

ii) Direct access resource: no direct access resource can be issued as an integrating resource (assumption that would be changed if proven incorrect).

c) Catalog as a monograph: Remote or direct access resource: a resource complete in one part or intended to be complete in a finite number of parts, including those resources that are corrected via "errata" information.

2) *Resources issued in loose-leaf format.* When deciding to catalog a bibliographic resource issued in loose-leaf format as a serial, an integrating resource, or a monograph, make the decision based on the type of issuance of the primary component. If there is a stated frequency, determine if the frequency applies to the primary component or to any updates.

Note that a bibliographic resource issued in loose-leaf format is not automatically to be cataloged as an updating loose-leaf.

a) Catalog as a serial:

i) Resource otherwise meeting definition of serial whose issues remain discrete even though they are to be stored in a binder (as successive sections in the binder or subdivided/filed into separate sections in the binder)

ii) Resource whose binders are issued successively even though the contents filed into each binder may be updated in integrating fashion until the next binder is issued

b) Catalog as an integrating resource: Resource consisting of a binder or binders in which pages are added, removed, or replaced until the next edition of the resource is published or until complete

c) Catalog as a monograph: Resource complete as issued or intended to be complete in a finite number of parts

3) *Conference publications.* Conference publications typically consist of the minutes, proceedings, etc., of a regularly-held meeting of one or more corporate bodies or are publications that contain the proceedings, etc., of ongoing topical conferences, symposia, or colloquia.

a) Catalog as serials ongoing conference publications that are being cataloged for the first time, unless they are covered by the exclusions in paragraph b) below. Consider a conference publication to be "ongoing" if words such as "first" or "annual" appear in conjunction with the name of the conference or the title of the publication or if multiple successive issues show that the publication is continuing in nature.

b) Catalog as monographs those conference publications that are not ongoing or that:

- i) have a [title](#) unique to each issue appearing on the chief source, and/or
- ii) are issued as part of a numbered monographic series.

Once the decision to catalog as a monograph or as a serial is determined based on the first—or earliest held—issue of a conference publication, prefer to retain that decision. When there is a change in the main entry for a conference publication cataloged as a serial, consider the publication to be "new" and decide whether to catalog it as a monograph or as a serial according to the above criteria.

When CONSER serial records exist for conferences represented by LC monograph records, LC serial catalogers will use "xlc" in the [042 field](#) but *will not* de-authenticate the records.

4) *Supplements*. If the supplement can be used independently from the main resource, create a separate bibliographic record for it based on its type of issuance. For other situations, give a note about the material on the record for the main resource.

[525](#) ## \$a Kept up-to-date by supplements.

Do not catalog a dependent supplement as a serial just because it has a stated frequency (e.g., an annual supplement to a monograph).

5) *Republications*

a) Republication of a serial: Generally, catalog a republication of a serial as a serial. However, catalog the following as a monograph:

A republication of a single issue or a limited number of issues

A collection of bibliographically unrelated serials or articles.

b) Republication of a monograph: Catalog as a monograph.

c) Republication of an integrating resource: Catalog as a monograph or as an integrating resource based on the type of issuance of the republication.

6) *Printed travel guides*. *LC practice as of 2001*: When deciding whether to catalog a printed travel guide as a serial or as a monograph and there is no information about the likelihood that it will be continued indefinitely, apply the following guidelines:

a) Generally, catalog a travel guide as a serial if it is general in scope because such guides usually are continued indefinitely. "General in scope" means the guide contains a variety of current information, e.g., about where to go, where to stay, and what to do. Apply this policy to state, region, or country guides for the United States, to region or country guides for other countries, and to guides for major cities. If a numeric or chronological designation is not available, supply a chronological designation based on the publishing or copyright date (cf. LCRI 12.3C1).

b) In case of doubt, catalog as a monograph.

7) *LC practice: Certain other printed resources*

After determining that the printed bibliographic resource

- is published in successive parts, and
- there is no information that the resource will be complete in a finite number of parts,
and
- it isn't one of the resources noted in [1\)-6\)](#) above, generally follow the decision to catalog as a monograph or as a serial for the specific categories in the two lists below. If the printed resource isn't represented by one of the categories below, catalog as a serial.

a) Catalog as monographs:

- books "issued in parts" (fascicles)
- cartographic materials
- censuses
- encyclopedias
- hearings
- publications of five-year plans

b) Catalog as serials:

- alumni directories
- college catalogs
- court reports
- sales/auction catalogs
- session laws

Edition or Copy of Monograph

This section represents *LC/PCC practice*.

When a new manifestation of an item reaches the cataloger, the question arises as to whether this is a copy of an earlier manifestation or an edition separate from the earlier manifestation needing its own bibliographic record. Consult the [definition of "Edition" in Appendix D](#). If, according to this definition, two items are known to be two different editions, create separate records for each.

Also, consider that a new edition is involved whenever

- 1) there is an explicit indication of changes (including corrections) of content; or,
- 2) anything in the following areas or elements of areas differs from one bibliographic record to another: title and statement of responsibility area, edition area, the extent statement of the physical description area, and series area. (*Note:* For printed music and sound recordings, consider that different editions exist whenever two items have different publisher's numbers or plate numbers). (For an exception relating to CIP items, see below.)

Whenever the question relates to the publication, distribution, etc., area or to ISBNs, consider that the item is a copy if the only variation is one or more of the following:

- 1) a difference in the printing or copyright date when there is also a publication date;
- 2) a minor variation in an entity's name. There are relatively few examples of this

phenomenon, which arises when a publisher uses multiple forms concurrently. For example, "Duckworth" and "G. Duckworth" and "St. Martin's" and "St. Martin's Press" have been used at the same time by these publishers. A genuine name change, even if minor, should not be considered as a variation;

3) the addition, deletion, or change of an ISBN;

4) a difference in binding; or,

5) a difference in the edition statement or the series whenever the item is a CIP book issued by the publisher in both a hardbound and a softbound version.

For variations in the publication, distribution, etc., area not covered by the preceding statements, consider that the item is a new edition. Noteworthy examples for the publication, distribution, etc., area are variations involving different places or entities transcribed or any difference in an entity's name that is suggestive of either a name change or a different entity. Examples of the latter case are the many instances of a sequence of names used, with one used for some time and another at some point replacing the first. For example, "Harper & Brothers" becomes "Harper & Row"; "Doubleday, Doran" becomes "Doubleday."

N.B. Rare books in general follow the same policy, with exceptions as necessary.

Change in Cataloging Decision: Monograph/Serial

This section represents LC/PCC *practice*.

At some point after one or more monograph bibliographic records has/have been created and another resource with the same choice of main entry and form of title proper is received for cataloging, determine if the resource should be cataloged as a serial to save the time of continuing to prepare separate monograph records. If the resource is a conference publication, see paragraph 3) in the section "[Situations Requiring Further Consideration](#)" above. Otherwise, consider the following aspects when making the decision to recatalog as a serial:

1) the resource should have a designation (e.g., date, numeric edition statement) that could be used as numbering;

2) the frequency of the editions is one to two years (give greater consideration to continuing to catalog as monographs if the editions are published three or more years apart).

LC practice: LC no longer routinely cancels fully cataloged monograph records. Notes are added to the serial and monograph records to assist users and staff to locate all holdings for the title in the library. The serial bibliographic record continues to describe the entire serial.

Note added to monograph record:

[500](#) ## \$a Issues for 1996- cataloged as a serial in LC. \$5 DLC

Note added to serial record:

[500](#) ## \$a Earlier issues, 1993-1995, cataloged as monographs in LC.
\$5 DLC

Note added to monograph record:

[500](#) ## \$a Editions for 1-2, 4, 6, 8- cataloged as a serial in LC.
\$5 DLC

Note added to serial record:

[500](#) ## \$a Editions for 3, 5, 7 cataloged as monographs in LC. \$5
DLC

Change in Type of Issuance

This section represents LC/PCC *practice*.

The publisher of a bibliographic resource may decide to change the type of issuance: monograph to integrating resource (e.g., issuing replacement pages to what had been a single-part monograph stored in a binder), monograph to serial (e.g., expanding the plan for the content of a multipart item so it no longer has a predetermined conclusion), serial to integrating resource (e.g., changing from publishing as successive issues to publishing as an updating Web site), etc.

Sometimes the cataloger will not have enough information at the time of creating the bibliographic record to determine the correct form of issuance. Information available later will indicate that the type of issuance represented by the bibliographic record isn't correct.

In order to accommodate the requirements for the distribution of MARC records by the Library's Cataloging Distribution Service and the Library's ILS restrictions on deletion of records in the database, follow the appropriate instruction given in the table below when the type of issuance of a resource has changed or more information shows that the original decision on type of issuance wasn't correct.

[Note: Final decisions have not yet been made for all of the categories. When the information is available, this section of the LCRI will be posted on the CPSO public Web site (<http://www.loc.gov/catdir/cpsol/>) until the LCRI is reissued.]

Initial Articles

This section represents LC/PCC *practice*.

Transcribe initial articles as found: in the title and statement of responsibility area (see [LCRI 21.30J](#) for the guidelines on setting the non-filing indicator in relation to the title proper on MARC records), edition area, series area, and note area. For the publication, distribution, etc., area, generally do not transcribe articles preceding the name of the publisher, distributor, etc.

1 For most libraries, credit activity is not part of their cataloging subscription price, with credits showing as transactions on their invoices. However, for some libraries that are on subscription pricing or are in group catalogs, credit activity may be included as part of the subscription price and therefore, has no impact on their billing.

2 Can be added if the field to be added has a different value in ¶2.

3 If field 050 already exists, then the added field must have a 2nd indicator coded 4, and all existing 050 fields must have a 2nd indicator coded blank or 0.

Multiple call numbers

Certain classification choices are local decisions. For example, if one user has chosen to class together a monographic series and another library classes it separately, multiple call numbers in the master record may be appropriate in these circumstances:

- Classed together vs. classed separately call numbers for monographic series
- Literature numbers vs. PZ numbers for fiction
- Bibliography number vs. subject
- LC minimal number vs. member call number
- Geographic classification vs. subject classification for maps and atlases
- LAW vs. actual K class number

4 If field 060 is present, then the added field must have a 2nd indicator coded 4, and all existing 060 fields must have a 2nd indicator coded blank or 0.

5 If field 082 is present, then the added field must have a 2nd indicator coded 4, and all existing 082 fields must have a 2nd indicator coded blank or 0.

6 If field 050 does not already exist.

7 If field 082 does not already exist.

8 If field 096 does not already exist.

9 If the bibliographic record is Encoding level 8 (CIP).

10 If the field added is in a scheme not already present in the record with the same 2nd indicator. However, if the 2nd indicator of the field being added is coded 4, the field can be added regardless of whether fields with the second indicator 4 is already present.

Anonymous FTP Allows retrieval of electronic resources from a remote site without requiring a user ID or password. (CCM)

ASCII American Standard Code for Information Interchange. A standard character-to-number encoding scheme used widely in the computing industry. The term "ASCII" is also used to refer to electronic files that consist only of plain text. (CCM)

Banner A band of text or text and graphics, usually situated at the top of a Web page, that contains title and/or author credits and tells the user what the content of the page is about. (OLAC)

Bibliographic resource An expression or manifestation of a work or an item that forms the basis of bibliographic description. A bibliographic resource may be tangible or intangible. (AACR2)

Blog (an abridgment of the term web log) a Web site, usually maintained by an individual, with regular entries of commentary, descriptions of events, or other material such as graphics or video. Entries are commonly displayed in reverse chronological order. "Blog" can also be used as a verb, meaning to maintain or add content to a blog. (Wikipedia, April 20, 2008)

Browsers Software programs for reading hypertext documents. Browsers are mounted locally either on-site for terminal mode or on the user's PC. Netscape, Internet Explorer, and Lynx are examples of hypertext browsers used to view World Wide Web documents. (CCM)

Client A software application that works on your behalf to extract a service from a server somewhere on the network (Krol)

Computer file see Electronic resource

Continuing resource A bibliographic resource that is issued over time with no predetermined conclusion. Continuing resources include serials and ongoing integrating resources. (AACR2)

Database A collection of logically interrelated data stored together in one or more computerized files, usually created and managed by a database management system. (Subject Cataloging Manual: Subject Headings)

Dial-up The most basic type of Internet account. users access the Internet by connecting with a computer and a modem to an ISP (Internet Service Provider). (NetLingo)

Direct access The use of electronic resources via carriers (e.g., discs/disks, cassettes, cartridges) designed to be inserted into a computerized device or its auxiliary equipment. (AACR2)

Domain name The address or URL of a particular Web site, it is the text name corresponding to the numeric IP address of a computer on the Internet. For example, www.netlingo.com is the domain name of the IP address "66.201.69.207." [Top-level domain extensions include .edu, .org, .com, .gov, etc.] (NetLingo)

Edition The use of electronic resources via carriers (e.g., discs/disks, cassettes, cartridges) designed to be inserted into a computerized device or its auxiliary equipment. (AACR2)

E-journal An electronic publication, it's similar to an e-zine but is typically found in academic circles. It is regularly published electronically, either solely or in addition to a printed version. (NetLingo)

Electronic mailing list Internet software that automatically processes commands in an email forum environment. It provides for automatic mailing of electronic serial issues to subscribers and handles messages sent to and from discussion lists. (CCM)

Electronic resource Material (data and/or program(s)) encoded for manipulation by a computerized device. This material may require the use of a peripheral directly connected to a computerized device (e.g., CD-ROM drive) or a connection to a computer network (e.g., the Internet). (AACR2)

E-mail (electronic mail) A system whereby a computer user can exchange messages with other computer users (or groups of users) via a communications network utilizing a standardized protocol. Some electronic journals are available via electronic mail subscriptions, either through an electronic mailing list or by direct email from the distributor of the serial. (CCM)

File (electronic resource) A basic unit in which electronic resources are organized and stored. (AACR2)

FTP (File Transfer Protocol) A protocol that defines how to transfer files from one computer to another; also the access method used to move files from a remote location to a local site for use. To retrieve files, the user initiates an FTP session by logging into a remote host computer, changing to the desired directory, and retrieving the files. (CCM)

Gateway A computer system that transfers data between normally incompatible applications or networks. It reformats the data so that it is acceptable for the new network (or application) before passing it on. (CCM)

Granularity The level of detail at which an information object or resource is viewed or described.

Home page The first page or front page of a Web site. It serves as the starting point for navigation, not be confused with a buffer page, doorway page, or splash page. (NetLingo)

The hypertext document that serves as the “preface” for a service or publication mounted on the World Wide Web. It is normally an introductory screen that provides general information about the institution maintaining the site, or a publication or group of publications available. Hypertext links are included to access specific documents or files archived at the site. (CCM)

Host computer A computer, also called a node, that directly provides service to a user. (CCM)

Host name The address of the host computer on which a remote-access electronic resource resides. (CCM)

HTML (Hypertext Markup Language) A subset of Standard Generalized Markup Language (SGML). The language in which World Wide Web documents are written. (CCM)

HTML header Refers to the HEAD element of HTML source code specifications. The HEAD element contains information about the current document, such as the TITLE element and keywords that may be useful to search engines, and other data that is not considered document content. The TITLE element can be displayed separately from the document in the browser title bar. (CCM)

HTML source A subset of Standard Generalized Markup Language (SGML). The language in which World Wide Web documents are written. (CCM)

Hypertext Transfer Protocol (http) Method of presenting information in which selected words or other document elements, when chosen, execute automatic links to related documents or files. The linked documents on the World Wide Web may contain graphics, sound, or even moving images. (CCM)

Integrating resource A bibliographic resource that is added to or changed by means of updates that do not remain discrete and are integrated into the whole. Integrating resources can be finite or continuing. Examples of integrating resources include updating loose-leafs and updating Web sites. (AACR2)

Internet The World Wide Web “network of networks” that are connected to each other, using the IP protocol or other similar protocols. The Internet provides file transfer, remote login, electronic mail, news, and other services. (Krol)

IP (Internet Protocol) The most important of the protocols on which the Internet is based. It allows a packet to traverse multiple networks on the way to its final destination. Often this is used in conjunction with TCP (Transmission Control Protocol) as in TCP/IP. (Krol)

IP address The Internet Protocol or numeric address of a computer connected to the Internet. It consists of four numbers separated by periods. (CCM)

Iteration An instance of an integrating resource, either as first published or after it has been updated. (AACR2)

Modem A piece of equipment that connects a computer to a data transmission line (typically a telephone line of some sort). (Krol)

Monograph A bibliographic resource that is complete in one part or intended to be completed within a finite number of parts. (AACR2)

PDF The file format for documents viewed and created by Adobe Acrobat Reader, Acrobat Capture, Adobe Distiller, Adobe Exchange, and the Adobe Acrobat Amber plug-

in. This technology has succeeded in standardizing the format of documents used and transferred on the Internet. (NetLingo)

Remote access (electronic resource) The use of electronic resources via computer networks. (AACR2)

SGML (Standard Generalized Markup Language) A standard for formatting textual documents so that they can be read by different document processing tools. (CCM)

Serial A continuing resource issued in successive of discrete parts, usually bearing numbering, that has no predetermined conclusion. Examples of serials include journals, magazines, electronic journals, continuing directories, annual reports, newspapers, and monographic series. (AACR2)

Server Software that allows a computer to offer a service to another computer. Other computers contact the server program by means of matching client software. Also, the computer on which the server software runs is often called the "server." (CCM)

Source code The form in which a computer program or Web site is written; for example, on the Internet, the source code for a Web page. The document source is the actual programming code that creates a Web page. Choosing this item from the "View" drop-down menu in a Web browser produces a page with a document's source code that includes an encoded "Title." [freely adapted from NetLingo] (OLAC)

Spash page An introductory first page or front page that you see on some Web sites, it usually contains a click-through logo or message or a fancy Flash presentation with some kind of announcement. The main content and navigation of the site reside "behind" this page (on the homepage or welcome page). (NetLingo)

TCP (Transmission Control Protocol) One of the protocols on which the Internet is based (a connection-oriented reliable protocol). Often used in combination with IP (Internet Protocol) as in TCP/IP (Krol)

Title bar he gray (or colored) bar at the top of each window which displays the [program](#) and file name (NetLingo)

Title screen (of an electronic resource) In the case of an electronic resource, a display of data that includes the title proper and usually, though not necessarily, the statement of responsibility and the data relating to publication. (AACR2)

Top-level domain (aka TLD) In the Domain Name System (DNS) hierarchy, it is the highest level under the root. In a domain name, it is that portion that appears furthest to the right; for example, the "com" in www.netlingo.com. Two letter domains, such as

.uk, .de and .jp (for example), are called "country code top-level domains" (ccTLDs) and correspond to a country, territory, or other geographic location. (NetLingo)

URI (Uniform Resource Identifier) In the case of an electronic resource, a display of data that includes the title proper and usually, though not necessarily, the statement of responsibility and the data relating to publication. (CCM)

URL (Uniform Resource Name) In the case of an electronic resource, a display of data that includes the title proper and usually, though not necessarily, the statement of responsibility and the data relating to publication. (CCM)

Web page There are many uses for this term, with subtle differences in meaning. The most technically correct usage is for a single HTML file that contains text and images, is part of a Web site, and has an individual file name assigned to it. When viewed by a Web browser, this file could actually be several screen dimensions long (appearing as more than "a page"). Large Web sites are said to have hundreds of pages of information. In this usage, "page" refers to the actual hundreds of separate documents varying in length, each with a different topic or subject. ... (NetLingo)

Web site A place on the World Wide Web that's comprised of files organized into a hierarchy. Each file or document contains text or graphics that appear as digital information on a computer screen. A site can contain a combination of graphics, text, audio, video, and other dynamic or static materials... As is the case with many Net terms, "Web site" is often used interchangeably with other words, such as homepage and Web page. For example, you may hear someone refer to their "homepage" when in fact they are talking about an entire Web site. (NetLingo)

World Wide Web In the case of an electronic resource, a display of data that includes the title proper and usually, though not necessarily, the statement of responsibility and the data relating to publication. (CCM)

Appendix H: Evaluation Form

Your reactions to this workshop will help us in planning future programs. Thank you for your assistance.

Name/institution: (Optional) _____

Trainers: _____

Sponsor: _____

Place and date: _____

Please circle the words that most nearly reflect your response to the statement.

- | | | | | | | |
|----|---|-------------------|----------|---------|-------|----------------|
| 1. | The presenters were well organized and informative. | strongly disagree | disagree | neutral | agree | strongly agree |
| 2. | The workshop content was relevant to my work. | strongly disagree | disagree | neutral | agree | strongly agree |
| 3. | I gained useful information in the sessions. | strongly disagree | disagree | neutral | agree | strongly agree |
| 4. | The exercises fit the material presented. | strongly disagree | disagree | neutral | agree | strongly agree |
| 5. | I had ample opportunity to raise questions during the sessions. | strongly disagree | disagree | neutral | agree | strongly agree |
| 6. | I had ample opportunity to raise questions during the exercises review. | strongly disagree | disagree | neutral | agree | strongly agree |
| 7. | The overall workshop met my personal expectations. | strongly disagree | disagree | neutral | agree | strongly agree |

8. Please tell us what you found to be most helpful in the workshop.

9. Were any topics not covered that you expected to be presented?

(Over)

10. How could we improve the content or other aspects of this workshop?

11. What topics would you like to see covered in future workshops?
