

REPORTING AUTHORITY CONFLICTS AND RECORDS NEEDED IN VOYAGER
(rev. 9-2-2004)

NOTE: UCLA Library Cataloging Center staff are not required to search deliberately for the situations described below; however, if they are encountered in the regular workflow, please follow these procedures. Consult with supervisor if questions arise.

Please DO submit the following CONFLICTS to the Authorities Section for editing and clean-up:

- OCLC Series Authority Records that conflict in **any** way (headings, treatment, etc.) with the local SAR.
- Authority records in Voyager with duplicate headings and conflicting MARC tags; i.e., an authority record wherein the same heading is listed as both a 4XX and a 5XX.

For example: 111 2 ‡a Texas-Mexico Conference on Astrophysics
 411 20 ‡a Mexico-Texas Conference on Astrophysics
 511 2 ‡a Mexico-Texas Conference on Astrophysics

- A screen print showing multiple authority records in Voyager for the same **geographic** heading.

For example: **1XX** France (110 1 _ heading)
 1XX France (151 DNLM heading)
 1XX France (151 DLC/NACO heading)

While both authorities with the 151 tags are valid, the authority with the 110 is not, and the Authorities Section would like to be notified of these records as you come across them.

Please DO submit the following AUTHORITY RECORDS to the Authorities Section:

- OCLC Authority Records with 130-tagged headings that are not series, but rather series-like phrases. Such records have a “c” in the **Series** character position of the fixed-field area; usually they also contain a 667 note directing the cataloger to “give phrase as a quoted note” (or similar statements). While records of this type are not conflicts per se, they need to be submitted because our authority processing vendor may not be able to bring them into the local database.
- DO submit New-to-File Series Authority Records with multiple 644, 645 and 646 fields (e.g., 644 f AND 644 n, 645 t AND 645 n, 646 s AND 646 c), **or that show any treatment other than “f/t/s” or “f/n/s”** (e.g., 644 f AND 645 t AND 646 c; 644 n AND 645 n AND 646 c). (NOTE: Copy catalogers should submit such SARs directly to their respective supervisors).

- Authority records for geographic headings of all types that only occur in a subject heading string as a subdivision in the UCLA catalog. Future authority processing may only add geographic authority records to our database for headings that occur as the main heading (651 _0 ‡a).

For example: 651 _0 Holalagondi (India) ‡x Antiquities
Will generate the addition of an authority record for:
151 _0 Holalagondi (India)

But: 650 _0 ‡a Temples ‡z India ‡z Holalagondi
Will not result in the addition of the geographic authority record

Many authority records for geographic headings which previously existed in TAOS are not in Voyager. Records for these headings need to be imported locally from OCLC/LC Authorities into Voyager.

Please do NOT submit the following to the Authorities Section:

- Authority records with New-to-File Headings (future authority processing will bring these into Voyager), except as noted above.
- DO NOT submit authority records for series (both traced and untraced) which are Cat-as-Sep f/t/s (i.e., 644 f AND 645 t AND 646 s) and f/n/s (i.e. 644 f AND 645 n AND 646 s).
- Local authority records with duplicate headings (the only difference being a ‡w) and identical MARC tags.

For example: 100 0 ‡a Mary ‡b II, ‡c Queen of England, ‡d 1662-1694
400 0 ‡w nnaa ‡a Mary ‡b II, ‡c Queen of Great Britain, ‡d 1662-1694
400 0 ‡a Mary ‡b II, ‡c Queen of Great Britain, ‡d 1662-1694

Unfortunately, numerous examples of the above now exist in the Voyager database (for the extremely literal MARS, the presence/absence of the ‡w signifies a “different” heading).; fortunately, these duplications do not constitute a conflict per se, and may eventually be removed via an in-house program. The Authorities Section cannot consider their removal a priority at this time.

Please add initials and date on all submissions, so that Authority Section staff can follow-up with any questions.
