

RDA Policies for Bibliographic records at UCLA (OCLC's policies available at: <http://www.oclc.org/us/en/rda/policy.htm> annotated)

UCLA: Continuing resources includes serials and integrating resources.

Aug. 3, 2010

- OCLC: Catalogers may contribute original cataloging using RDA to WorldCat if desired. (040 \$e with value **rda** and Leader/18 (Desc) coded **i** if ISBD punctuation is used or **blank** if not).

UCLA: Except for Hermine Vermeij (official tester for MLA-OLAC), UCLA monograph catalogers and non-CONSER continuing resources catalogers will not contribute RDA records to WorldCat. UCLA CONSER catalogers may consider using RDA if they are cataloging a continuing resource that is related to another continuing resource that has been cataloged using RDA; consult Valerie Bross in these cases.

- OCLC: For materials other than continuing resources, catalogers are asked NOT to edit a WorldCat full-level master record (ELvl values **blank**, **1**, **4**, **8**, **I**, and **L**) to change it from one set of rules to another. In other words, if the record was created according to AACR2 (and coded as such), please do not change the master record to RDA. If the record was created according to RDA (and coded as such), please do not change the master record to AACR2.

UCLA: In full-level RDA records: check for (and correct) typos in transcribed fields; do NOT alter abbreviations/spelled-out words; do not alter case; do not add or subtract data from descriptive fields.

- OCLC: For records describing continuing resources, a cataloger may change a record from AACR2 (or earlier rules) to RDA as part of the process of updating information in the record. Once the record has been changed to RDA, please do not change it back to AACR2.

UCLA: CONSER catalogers are awaiting documentation regarding maintenance of CONSER records. In general, UCLA continuing resources catalogers will not introduce RDA into records that are AACR2 records. If the record is AACR1 or earlier, follow the practice in place as of June 1, 2010.

- OCLC: If a record is a minimal-level or less than minimal-level record (ELvl values **K**, **M**, **2**, **3**, **5**, and **7**), a cataloger may change the record from AACR2 to RDA as a part of the process of upgrading the record to full-level (ELvl values **blank**, **1**, **4**, and **I**). As in the previous bullet, please do not change it back to AACR2 once it has been upgraded and changed to RDA [Clarification received from OCLC on 7/27/10: OCLC prefers that any RDA record, including minimal-level records that have not yet been upgraded, NOT be changed to AACR2 during the upgrade process.]

UCLA: Except for Hermine Vermeij (official tester for MLA-OLAC), monograph catalogers and non-CONSER continuing resources catalogers will upgrade minimal or less non-RDA records using AACR2. If any minimal or less-than-minimal RDA records are encountered by monograph or non-CONSER continuing resources catalogers, we will consult with ACCM at that time. CONSER catalogers will follow the policies to be established by CONSER.

- OCLC: If an existing record is not coded as following either AACR2 or RDA (i.e. coded **blank** or **i** in Leader/18 (Desc) and 040 \$e is not present), a cataloger may edit the master record to follow either AACR2 or RDA when upgrading the record.

UCLA: Except for Hermine Vermeij (official tester for MLA-OLAC), if upgrading is necessary, monograph catalogers and non-CONSER continuing resources catalogers will upgrade records that lack 040 \$e rda to conform to AACR2. (Reminder: Records appropriately created according to AACR1 and coded blank or i are not changed to conform to AACR2 if there is no other reason to upgrade the record.) CONSER catalogers will follow current CSR guidelines unless superseded by new CONSER policies.

- OCLC: When performing copy cataloging, catalogers may LOCALLY edit records created under any rules to another set of rules. Please do NOT replace the master record for this purpose (unless upgrading as outlined in the previous 2 bullets).

UCLA: copy-catalogers will NOT change RDA records locally to conform to AACR2 rules.

- OCLC: If a record created according to either AACR2 or RDA already exists in WorldCat, please do NOT create a duplicate record according to the other code. Such duplicates are not within the scope of the OCLC policy on parallel records and OCLC staff will merge them if found.

UCLA: Do not create a new record if there is an existing RDA record for the item that you are cataloging. See above for what to do in specific situations.
